

Shared truckload: The furniture shipper's secret weapon

Tired of lugging furniture through the damage-prone LTL system or overpaying on a whole truck? Learn how **shared truckload (STL)** improves furniture shippers' on-time delivery, reduces damage by 120x, lowers shipping costs, and eliminates freight's carbon footprint.

Move furniture with confidence

- **99.99% damage free:** Furniture remains on one truck from pickup to delivery with no re-arranging in between, making STL shipping 120x safer than LTL.
- **On-time delivery:** We give you full control over pickup and delivery dates and times, so you can stop wasting money on missed appointment fees.

Ease your shipping headaches

- **No sneaky fees:** STL pricing is completely transparent – you'll never have to worry about a reweigh, reclass, or Cubic Capacity & Density (CCD) fees.
- **Perfect for midsize freight:** Can't fill a whole truck? We'll move your 8-44 linear feet of furniture in a shared truckload, and only charge for the space you need.
- **No pallets, no problem:** Whether your freight is floor loaded or palletized, our great rates remain the same.

Try the smarter way to ship

- **Complete visibility:** With STL, one driver – rather than many – is responsible for your load, making shipment tracking simple and accurate.
- **Carbon neutral:** STL reduces emissions by up to 40% per shipment with streamlined transit. When furniture shippers book our guaranteed STL service, **FlockDirect**, we offset that shipment's remaining impact – for free.
